Revised Project Roadmap

Overview:

Due to the inclusion of additional scope added to the project such as the addition of code reviews and delays in the project, we have collectively decided as a team to devise a new project plan for our client, Professor Vong. Thus we are hereby requesting a Revised Project Plan and Scope change to the Ride Along application with the new following roadmap.

Revised Project Roadmap:

Purpose

By the addition of these new Milestone 3, 4, and 5 deadlines we will be able to deploy our project on time while being able to present our features in code review sessions with our client in order to ensure quality and performance of the application. Ideally the milestones will be completed in order, but certain aspects of later features, such as the use story for User Administration - 1 will be completed earlier in order to test certain functionalities in the application for testing and for code reviews. These dates are open to discussion as well as switching of certain features, though some are required to stay in a certain time slot to be finished for code reviews.
