

Retrospective and Action Plan

Sprint 21

Sprint Velocity

- Number of story points completed in one Sprint 4/23 - 4/29
 - Velocity = 104

What did we do well?

- Jason: Completed a good chunk of service Log and able to condense some user stories logic to one 'user story' as well as complete my goal for the week.
- Gio: Was able to complete the backend for Donate Your Car feature and was also able to fix database issues and as able to run the test users
- Jesus: Although a tad bit later than expected, I accomplished one of the two goals I set for myself entirely, and made a functional Logging. I also found it helpful to set a goal for myself, as it gave me a clear and obvious deadline that helped me move forward faster with my work
- Rainier: We got more front end complete. VP-1, VP-4, and VP-5 work.
- Vi: With the better task break down it was easier for me to track my progress

What could we improve on?

- Jason: Increasing our velocity this sprint to meet project deadline
- Gio: I was set back with debugging my computer and as unable to work on the front end until I was able to fix the problem. I need to add effort point to debugging my feature.
- Jesus: I should be more realistic with how I am distributing my work hours, as I am better at doing single long continuous days of work, rather than hours sprinkled throughout the week, as I have been trying
- Rainier: My goal for Vehicle Profile was to finish all of VP front end by the 26th. I could not finish that.
- Vi: Still need to break task down better since I feel like some parts were still a little ambiguous

How do we fix it?

- Jason: Working more efficiently and prioritizing tasks that make future work easier.
- Gio: Adding more effort point to my work item that relates to debugging or setting up.
- Jesus: Schedule myself 2-3 days of long work hours rather than speckled work hours throughout the week
- Rainier: Spend more time working on the features and less time working on the css.

Retrospective and Action Plan

Sprint 21

- Vi: Ask teammate on reading and giving feedbacks on your task breakdown

Action Plan

- **Goals for Sprint 21:**

1. Vi : Initiate 2 meetings/contact with Client each sprint
 - We need help with our features, since they are big, they come off as overwhelming hence it's hard for us to make the deadline
2. Rainier: Try to work on the user claims service.
 - Even though I can create vehicles, a user can't see the vehicle they just created because they don't have the claim to do so. Being able to create, modify, and delete claims will be helpful to call within our service layers.
3. Jesus: Finish Front-end/Tests for rental fleet AND do either LLD for Usage Dashboard or Work on SYC (If Vi finishes peer review)
 - While awaiting my peer review for SYC, I want to look back and finish my prior feature which was supposed to be "on hold" in terms of my own time (DUE 5/3). Once I finish with that, I should either focus on LLD for Usage Dashboard, or focus entirely on implementing my feature SYC, if Vi is done prior to 5/3.
4. Giovanni: Finish Front-End of DonateYourCar feature and start working on Communication Establish new feature
 - I am still lacking in front end coding but now I am more confident in creating the back-end for my features.
5. Jason: Send email on 4/23 to Vong for feedback on Sprint Retrospective and Sprint Planning. Implement new feedback on Sprint Planning 22 on 4/29.
 - Allows us to properly plan our sprints and give the team proper feedback making our Sprint process more efficient. In addition, it gives us a full breakdown of the tasks we are expecting to finish this week.

Based on the feedback

- **Goals for Sprint 22:**

1. Vi: Breakdown tasks to most glandular state
2. Rainier: Prioritize user claims service to ensure seamless user experience.
3. Jesus: Complete front-end and tests for rental fleet and proceed with either LLD for Usage Dashboard or SYC feature implementation.
4. Giovanni: Finalize front-end of DonateYourCar feature and commence work on Communication Establishment for the new feature.
5. Jason: +Members must complete 50% or more of expected effort points this sprint

Retrospective and Action Plan

Sprint 21

- Allows our team to finish a necessary amount of work for our Team Presentation and subsequent code reviews in the future.
